Calvert Ultra-Short Income Fund: A Shares

OBJECTIVE	STRATEGY	MORNINGSTAR CATEGORY: Medium Quality/Short Duration	MORNINGSTAR BOX
The Fund seeks to maximize income to the extent consistent with preservation of capital, through investment in short-term bonds and income-producing securities.	The Fund seeks to achieve its investment objective by investing, under normal circumstances, at least 80% of its net assets in a portfolio of floating-rate securities (e.g., corporate floating rate securities) and securities with durations of less than or equal to one year. The Fund typically invests at least 65% of its net assets in investment grade debt securities, as assessed at the time of purchase. The remaining 35% of the Fund's assets may be in below-investment grade, high-yield debt securities. These securities involve greater risk of default or price declines than investment grade debt securities. The Fund invests principally in bonds issued by U.S. corporations, the U.S. government or its agencies, and U.S. government-sponsored enterprises. The Fund may also invest in trust preferred securities, taxable municipal securities, asset-backed securities, including commercial mortgage-backed securities, repurchase agreements, and foreign debt securities. The Fund uses an active trading strategy, seeking relative value to earn incremental income. The Fund's investment process is enhanced by the Advisor's integrated investment research, which seeks to add value by complementing traditional fundamental security analysis with the Advisor's proprietary assessment of critical environmental, social and governance ("ESG") issues. The Fund seeks to apply ESG integration across sectors and holdings as part of its risk and opportunity assessment, and also seeks to avoid investing in tobacco companies.	The Morningstar Style Box depicts a fund's current investment strategy. For fixed-income funds, the vertical axis shows average credit quality (high, medium, or low); the horizontal axis shows interest-rate sensitivity (limited, moderate, or extensive).

The performance data quoted represents past performance, which does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be higher or lower than the performance data quoted. Index reflects no deductions for fees or expenses. An investor cannot invest directly in an index. Visit www.calvert.com to obtain performance data current to the most recent month-end. Returns for periods of less than one year are not annualized.

Calvert Ultra-Short Income Fund: A Shares

Performance Attribution (gross returns vs. passive benchmark) 3Q Quarter 2014

TOTAL EFFECT	DURATION EFFECT	CURVE EFFECT	SECTOR EFFECT	SELECTION EFFECT
17	1	1	15	0

In the third quarter, the fund outperformed its passive benchmark, the Barclays US Short Treasury 9-12 Month Index, by 17 basis points (bps). Its overweight to spread sectors was the primary driver of outperformance. Holdings in the banking and consumer asset-backed (ABS) sectors were the strongest performers and contributed the most to the fund's total return in the quarter. The fund's small opportunistic allocation to short duration high yield corporate securities was a detractor.

Total effect:Aggregate or total active return, which is return relative to the passive benchmark (outperformance or underperformance).
Duration effect: Active return attributable to overall duration. (Duration measures a portfolio's sensitivity to changes in interest rates. Generally, the longer the duration, the greater the change in value in response to a given change in interest rates.) This measures the effect of a parallel shift either up or down in the entire yield curve.
Curve effect: Active return attributable to yield curve positioning. This measures the effects of a change in the shape of the yield curve (a non-parallel shift).
Sector effect:Active return attributable to sector selection.
Selection effect:Active return attributable to security selection (includes intra-day trading).

All fixed-income attribution measures are in basis points (one basis point is 0.01 percentage points).

The Fund may or may not still invest in, and no action is recommended on, companies listed. For the most recently available information on the Fund's holdings, visit ***www.calvert.com****.*

Investment in mutual funds involves risk, including possible loss of principal invested. You could lose money on your investment in the Fund or the Fund could underperform because of the following risks: the market prices of bonds held by the Fund may fall; individual investments of the Fund may not perform as expected; and/or the Fund's portfolio management practices may not achieve the desired result. Bond funds are subject to interest rate risk and credit risk. When interest rates rise, the value of fixed-income securities will generally fall. In addition, the credit quality of the securities may deteriorate, which could lead to default or bankruptcy of the issuer where the issuer becomes unable to pay its obligations when due. Because a significant portion of securities held by the Fund may have variable or floating interest rates, the amount of the Fund's monthly distributions to shareholders are expected to vary. Generally when market interest rates fall, the amount of the distributions will decrease. Investments in high-yield, high risk bonds can involve a substantial risk of loss. An active trading style can result in higher turnover (exceeding 100%), may translate to higher transaction costs, may increase your tax liability, and may affect Fund performance. The Fund is non-diversified and may be more volatile than a diversified fund.

Holdings are subject to change.

Negative Cash positions may occur as the result of varying settlement schedules for securities.

Ratings are determined by using S&P, Moody's and Fitch rating services, whose rating categories are reflected above respectively. The letter ratings generally range from AAA (judged to be of the highest quality, with minimal credit risk) to D (the lowest rated class of bonds, typically in default with respect to timely payment of principal or interest). Bonds rated by all three services are assigned the median rating; if a bond is rated by only two agencies, it is assigned the lowest rating; if it is only rated by one agency, it is assigned that rating. Government securities may be rated lower than AAA/Aaa/AAA or may not be rated, and may include foreign government securities. If a bond is not rated by any of the aforementioned rating services, it appears in the "Not Rated" category. Ratings are subject to change.

The Fund seeks to avoid investing in companies classified under the tobacco industry sector of the Barclays Global Aggregate Index, the Barclays U.S. High Yield Index or the Barclays Global Emerging Market Index; or, in the opinion of the Fund's Advisor, any similar securities in the Barclays Municipal Index.

Net assets include all share classes.

Calvert funds are available at NAV for RIAs and Wrap Programs. Not all funds available at all firms.
