

Calvert Emerging Markets Equity Fund: A Shares

OBJECTIVE	STRATEGY	MORNINGSTAR CATEGORY: Large Growth	MORNINGSTAR BOX
-----------	----------	---------------------------------------	-----------------

The Fund seeks long-term capital appreciation by investing primarily in equity securities of companies located in emerging market countries, in accordance with the Fund's sustainability and corporate responsibility criteria.

The Fund normally invests at least 80% of its assets in equity securities of companies located in emerging market countries. The Sub-advisor considers emerging market countries to be those included in the Fund's benchmark index, the MSCI Emerging Markets Index; countries determined by the World Bank to have a low to middle income economy; and other countries or markets with similar emerging market characteristics as determined by the Sub-advisor. A company is considered to be located in an emerging market if it has a class of securities whose principal securities market is in an emerging country; is organized under the laws of, or has a principal office in, an emerging country; derives 50% or more of its total revenues or earnings from goods produced, sales made, or services provided in one or more emerging countries; or maintains 50% or more of its assets in one or more emerging countries. The Sub-advisor seeks to identify companies located in emerging market countries that are trading at a discount to what the Sub-advisor believes to be their intrinsic value but have the potential to increase their book value. To this end, the Sub-advisor combines a top-down approach to country analysis with a bottom-up approach to fundamental company research. The Fund seeks to invest in emerging market companies whose products/services or industrial/business practices contribute towards addressing one or more global sustainability challenges in their local and/or international markets, including development, poverty and health; environment and climate change; and rights and governance.

The Morningstar Style Box™ depicts a fund's current investment strategy. For equity funds, the vertical axis shows the market capitalization of the stocks owned; the horizontal axis shows investment style (value, blend, or growth).

The performance data quoted represents past performance, which does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be higher or lower than the performance data quoted. Index reflects no deductions for fees or expenses. An investor cannot invest directly in an index. Visit www.calvert.com to obtain performance data current to the most recent month-end. Returns for periods of less than one year are not annualized.

Equity holdings only. Return calculation is based on daily holding periods and excludes all fund expenses and trading costs. Portfolio weight is calculated as the average weight over the quarter.

The performance data quoted represents past performance, which does not guarantee future results. Current performance may differ from that shown. The statistical information above is taken from sources believed to be reliable but cannot be guaranteed as to accuracy.

Investment in mutual funds involves risk, including possible loss of principal invested. You could lose money on your investment in the Fund, or the Fund could underperform, because of the following risks: the market prices of stocks held by the Fund may fall; individual investments of the Fund may not perform as expected, and/or the Fund's portfolio management practices may not achieve the desired result. Investing in foreign securities involves additional risks relating to political, social, and economic developments abroad; differences between the regulations that apply to U.S. and foreign issuers and markets; the potential for foreign markets to be less liquid and more volatile than U.S. markets; and currency risk associated with securities that trade or are denominated in currencies other than the U.S. dollar. In addition, the risks of investing in emerging market securities are greater than those of investing in securities of developed foreign countries. The Fund is non-diversified and may be more volatile than a diversified fund.

Holdings are as of the date shown above, may change at any time and are not recommendations to buy or sell any security.
