

## Calvert VP EAFE International Index Portfolio

| OBJECTIVE   | STRATEGY   | MORNINGSTAR CATEGORY:<br>Large Blend  | MORNINGSTAR BOX   |
|---|--|---|---|
| The Portfolio seeks investment results that correspond to the total return performance of common stocks as represented by the Morgan Stanley Capital International EAFE (Standard) Index. | The Portfolio seeks to substantially replicate the total return of the securities comprising the MSCI EAFE Index, taking into consideration redemptions, sales of additional shares, and other adjustments. Under normal circumstances, the portfolio will invest at least 80% of its assets in investments with economic characteristics similar to the stocks represented in the MSCI EAFE Index. The MSCI EAFE Index is a widely accepted benchmark of international stock performance that emphasizes the stocks of companies in major markets in Europe, Australia and Asia (including the Far East). | The Morningstar Style Box™ depicts a fund's current investment strategy. For equity funds, the vertical axis shows the market capitalization of the stocks owned; the horizontal axis shows investment style (value, blend, or growth). |  |

The performance data quoted represents past performance, which does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be higher or lower than the performance data quoted. Index reflects no deductions for fees or expenses. An investor cannot invest directly in an index. Returns for periods of less than one year are not annualized. Performance assumes the reinvestment of all distributions, and reflects the deduction of fund expenses and applicable fees, but does not reflect fees and charges imposed under the variable annuity and life insurance contracts through which an investment may be made. If these fees and charges were included, they would reduce these returns.

Investment in mutual funds involves risk, including possible loss of principal invested. You could lose money on your investment in the Portfolio or the Portfolio could underperform because of the following risks: the stock market (including markets outside the U.S.) or stocks in the MSCI EAFE Index may fall in value, causing prices of stocks held by the Portfolio to fall; individual investments of the Portfolio may not perform as expected; and/or the Portfolio's portfolio management practices may not achieve the desired result. An index fund has operating expenses; a market index does not. Although expected to track its target index as closely as possible while satisfying its investment criteria, the Portfolio will not be able to match the performance of the index exactly. It is not possible to invest directly in an index. Investment in foreign securities involves greater risks than U.S. investments, including political and economic risks and the risk of currency fluctuations.

Holdings are as of the date shown above, may change at any time and are not recommendations to buy or sell any security.

Calvert funds are available at NAV for RIAs and Wrap Programs. Not all funds available at all firms.
