

Calvert Balanced Portfolio: A Shares

OBJECTIVE	STRATEGY	MORNINGSTAR CATEGORY: Large Blend	MORNINGSTAR BOX
The Fund seeks to achieve a competitive total return through an actively managed portfolio of stocks, bonds, and money market instruments, which offer income and capital growth opportunity and which satisfy the investment criteria, including financial, sustainability and social responsibility factors.	The Fund invests in a combination of stocks, bonds, and money market instruments seeking to provide a complete investment portfolio in a single product. The Fund typically invests about 60% of its net assets in stocks and 40% in bonds or other fixed-income investments. The equity portion of the Fund is primarily a large cap core U.S. domestic portfolio, although the Fund may also invest in foreign stocks and mid-cap stocks. The fixed-income investments are primarily a wide variety of investment-grade debt securities, including corporate, mortgage-backed, and other asset-backed securities. The Fund uses a multi-manager approach that combines complementary equity investment styles with Calvert's in-house, relative-value fixed-income approach. The Advisor monitors the Fund's allocation and may rebalance or reallocate the Fund's assets based on its view of economic and market factors and events. The Fund seeks to invest in companies and other enterprises that demonstrate positive environmental, social and governance performance as they address corporate responsibility and sustainability challenges.	The Morningstar Style Box™ depicts a fund's current investment strategy. For equity funds, the vertical axis shows the market capitalization of the stocks owned; the horizontal axis shows investment style (value, blend, or growth).

Performance Attribution (gross returns vs. passive benchmark) 4Q Quarter 2014

TOTAL EFFECT	DURATION EFFECT	CURVE EFFECT	SECTOR EFFECT	SELECTION EFFECT
7	-36	-7	54	-4

In the fourth quarter, the fund (gross of fees) outperformed its passive benchmark, the Barclays US Credit Index, by 7 basis points (bps). Its underweight to corporate credit and overweight to securitized sectors, which are not in the benchmark, was the primary driver of outperformance. Underweights to duration and the long end of the yield curve were detractors. Intermediate and longer interest rates declined during the quarter while credit spreads widened. The fund's out-of-benchmark allocation to securitized assets, particularly consumer asset-backed securities (ABS), non-agency mortgage-backed securities (RMBS), and single-borrower commercial MBS (CMBS) deals, was a positive contributor to performance as these securities outperformed sectors in the credit index.

Total effect: Aggregate or total active return, which is return relative to the passive benchmark (outperformance or underperformance).

Duration effect: Active return attributable to overall duration. (Duration measures a portfolio's sensitivity to changes in interest rates. Generally, the longer the duration, the greater the change in value in response to a given change in interest rates.) This measures the effect of a parallel shift either up or down in the entire yield curve.

Curve effect: Active return attributable to yield curve positioning. This measures the effects of a change in the shape of the yield curve (a non-parallel shift).

Sector effect: Active return attributable to sector selection.

Selection effect: Active return attributable to security selection (includes intra-day trading).

All fixed-income attribution measures are in basis points (one basis point is 0.01 percentage points).

May not add to 100% due to rounding

Investment in mutual funds involves risk, including possible loss of principal invested. You could lose money on your investment in the Fund or the Fund could underperform because of the following risks: the market prices of stocks or bonds held by the Fund may fall; individual investments of the Fund may not perform as expected; and/or the Fund's portfolio management practices may not achieve the desired result. There is a risk that the Advisor may allocate assets to an asset class that that underperforms other asset classes.

Allocation percentages may not add to 100% due to rounding. Negative Cash positions may occur as the result of varying settlement schedules for securities.

Holdings are as of the date shown above, may change at any time and are not recommendations to buy or sell any security.

Ratings are determined by using S&P, Moody's and Fitch rating services, whose rating categories are reflected above respectively. The letter ratings generally range from AAA (judged to be of the highest quality, with minimal credit risk) to D (the lowest rated class of bonds, typically in default with respect to timely payment of principal or interest). Bonds rated by all three services are assigned the median rating; if a bond is rated by only two agencies, it is assigned the lowest rating; if it is only rated by one agency, it is assigned that rating. Government securities may be rated lower than AAA/Aaa/AAA or may not be rated, and may include foreign government securities. If a bond is not rated by any of the aforementioned rating services, it appears in the "Not Rated" category. Ratings are subject to change.

Net assets include all share classes.

Calvert funds are available at NAV for RIAs and Wrap Programs. Not all funds available at all firms.
